

H. Şeyda Gündüz Jordan

AI Systems • Evaluation & Quality • Engineering Leadership
Zurich, Switzerland • seydagunduz@gmail.com • seydi89.github.io
linkedin.com/in/seyda-gunduz-jordan • Authorised to work in Switzerland

Profile

AI and engineering leader with 15+ years building and evaluating production software systems and leading teams. Focused on making complex systems observable, traceable, and trustworthy, first in production cloud platforms and now in AI systems. Currently completing an MSc in Informatics (Artificial Intelligence) at the University of Zurich.

Selected AI and Software Projects

MRI-to-Synthetic-CT Generation with Diffusion Models *UZH & University Hospital Zurich, 2025*

- Designed and implemented an end-to-end pipeline for synthetic CT generation from paired MRI-CT data, covering data analysis, preprocessing, conditional diffusion-model training, inference optimisation and evaluation against established baselines.
- Developed the experimental [codebase](#) and co-authored the [research report](#).

Trajectory-Aware Diverse Memory Selection *Independent research, 2026*

- Built a reproducible framework comparing metric-space magnitude, relevance, and MMR for memory selection under token constraints; experiments across datasets, encoders, and budgets showed that geometric diversity alone did not improve evidence selection.

RadConductor – Medical-imaging workflow orchestration *Independent project, 2026–present*

- Developing an agentic framework designed to interpret medical images, select and coordinate suitable AI models and analytical tools, validate their outputs, and produce traceable findings and measurements for human review.

Professional Experience

Toptal Remote *Quality Engineering Manager (Contract)* 2019–2024

MODE • Cybersecurity 2024

- Built test automation for an end-to-end encrypted backup communication channel designed to maintain company communications during cyber incidents, and trained the internal QA teams to extend it.
- Bridged product and development teams, turning product intent into testable requirements and improving the end-to-end delivery process.

INTELCARE • Healthcare technology 2021–2022

- Took ownership of an undocumented production platform built on asynchronous Azure Functions, reverse-engineering its behaviour and requirements.
- Implemented distributed tracing across 10+ services, built the automated test suite, and trained the development team in quality and product practices before handover.

LYKKE FOR EMAAR GROUP • Fintech and blockchain 2019–2020

- Joined at project inception on a blockchain-based property and loyalty platform developed by Lykke for Emaar Group, spanning property transactions, referral incentives, and rewards redeemable across Emaar businesses.
- Built the test-automation framework within the first month and grew the QA team to six engineers within a programme of approximately 50 people.
- Acted as quality lead across the whole programme: introduced observability, unified code practices across teams, and defined release pipelines, processes and checklists.
- Challenged the platform architecture with load and stress tests that exposed transaction handling issues under pressure.

Cruit World OÜ Remote *Founder, part-time* 2021–2023

- Took an AI-assisted hiring platform from concept to working MVP, defining the product roadmap and building CV parsing, semantic job matching, candidate ranking, Firebase authentication, and protected

API integrations.

- Conducted product discovery with job seekers, recruiters, and hiring managers to validate user needs and refine the product direction.

Aurea Software

Remote

Test Automation Chief Software Architect

2018–2019

- Designed the test-automation architecture for the rewrite of Kayako, a customer-support platform, including framework conventions, CI/CD quality gates, and performance benchmarks, and mentored engineers across product teams in applying it.

Comodo Software Solutions

Ankara, Turkey

Test Automation Architect

2017–2018

- Architected the organisation's test-automation framework and led 20+ quality engineers across multiple QA teams in adopting, customising, and extending it.

T2

Ankara, Turkey

Senior QA and Software Engineer

2015–2017

- Integrated new sensors into a central station system as a software engineer on a national defence project.
- Designed and delivered BDD workshops for one of Turkey's largest banks, and advised its transformation leadership on adoption.
- Worked with Turk Telekom stakeholders to clarify requirements and resolve technical and delivery trade-offs.

Innova IT Solutions

Ankara, Turkey

Test Automation Consultant

2014–2015

- Automated the full end-to-end testing process: read requirements from BPMN XML files, generated and ran API tests with automatic reporting, and verified results against the UI's process history.
- Cut the effort of each requirements change from 5–6 days of manual API test updates by 11 people to an automated run of about 90 minutes.

Various Organisations

International

Test Engineer

2009–2014

- Tested enterprise and public-sector software, including the website of the NYC Department of Education and Microsoft product localisation through Lionbridge.

Education

University of Zurich

Zurich, Switzerland

MSc Informatics – AI Major; Data Science Minor

2024–February 2027 (*expected*)

Coursework includes deep learning, advanced machine learning, RAG, vision algorithms, reinforcement learning, human-centred AI.

Bilkent University

Ankara, Turkey

Non-degree graduate coursework – Machine Learning

2015

Middle East Technical University

Ankara, Turkey

BSc in Statistics

2006–2010

Technical Skills

AI and machine learning: Python, PyTorch, diffusion models, computer vision, retrieval-augmented generation, embedding-based retrieval, model evaluation

Cloud and production systems: Azure, serverless and event-driven systems, CI/CD, observability, distributed tracing, monitoring, performance testing

Software engineering: Software architecture, API integration, test-automation architecture, Java, TypeScript
